

SUŠARE / Dryers

JUČER I DANAS / Yesterday and today

Rođeni smo 1952 kao "Officine Minute" baveći se, prvenstveno proizvodnjom i montažom plamenika kućne namjene. Nakon što smo razvili proizvodnju generatora toplog zraka i plamenika za sušare duhana, 1966 počeli smo s proizvodnjom sušara za žitarice i uljarice što je s vremenom postala glavna djelatnost. Posljednjih godina bilježimo značajan napredak te postajemo vodeći proizvođač sušara u mnogim evropskim zemljama.

We were founded under the name of "Officine Minute" in 1952, working primarily in the construction and assembly of burners for civil use. After diversifying our range of products with hot-air generators and burners for tobacco dryers, in 1966 we began constructing dryers for cereals which, gradually, became our main field of operations. During this time, we were continuously expanding, developing into a leading company in many of the European countries.

The first dryer in 1966

Trenutno na 4600 m2 nadkrivenog prostora razvijamo sve aktivnosti oko proizvodnje naših proizvoda. Opremljeni smo robotiziranim strojevima koji mogu da zadovolje sve zahtjeve koje od nas potražuju naši kupci, u jako kratkom vremenu.

Our factory is currently situated under a covered area of 4600 m2 where we perform all the activities involved in the construction of our products. We are equipped with robotised machines which permit us to rapidly fulfil the various orders received from our customers.

PROIZVODNI PROGRAM / Our Products

Proizvodimo velike sušare za velike industrijske komplekse kao i male sušare za obiteljska gospodarstva.

We manufacture both large dryers for industrial plants and small ones for agricultural enterprises.

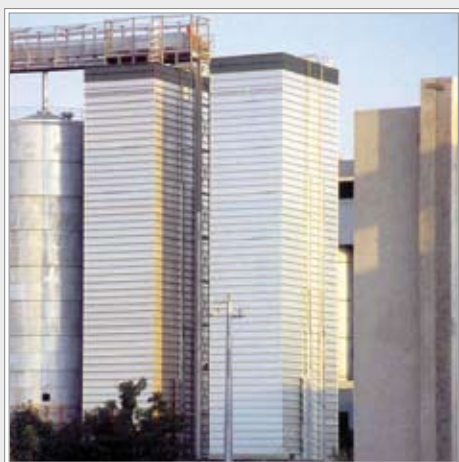

Naše sušare omogućuju doradu različitih zrnatih proizvoda. Mnoge uljare u Italiji i inozemstvu, koriste naše sušare za sušenje uljarica (soja, suncokret, uljana repica)
Postavili smo različite specifične sušare za rižu

*Our dryers are suitable for a wide range of grains. Many oil mills in Italy and abroad use our machines for drying oleaginous seeds (soybean, sunflower, rape seed).
We have supplied several units for paddy drying, both with batch and with continuous operation.*

Sušara sa recirkulacijom za RIŽU kapaciteta 60 Tona

POSEBNA PAŽNJA NA DETALJE / Our Care of Detail

Svaki detalj je pažljivo obrađen zahvaljujući našem dugogodišnjem iskustvu i savjetima naših kupaca. Velika pažnja posvećena je sigurnosti sušara, jednostavnom rukovanju te lakom održavanju i čišćenju.

Great care is paid to all details, thanks to our many years of experience and the feedback we receive from our customers. We dedicate special attention to the safety of our machines and to the ease of their maintenance and cleaning operations.

Mozak sušare je elektro upravljački ormar. Proces sušenja prati se PLC-om (Programabilnim logičkim kontrolerom) i TOUCH SCREEN-om (upravljanje dodirom na monitor) sa programom koji je u stalnom razvoju, sa mogućnošću on-line održavanja te praćenja procesa preko PC-a.

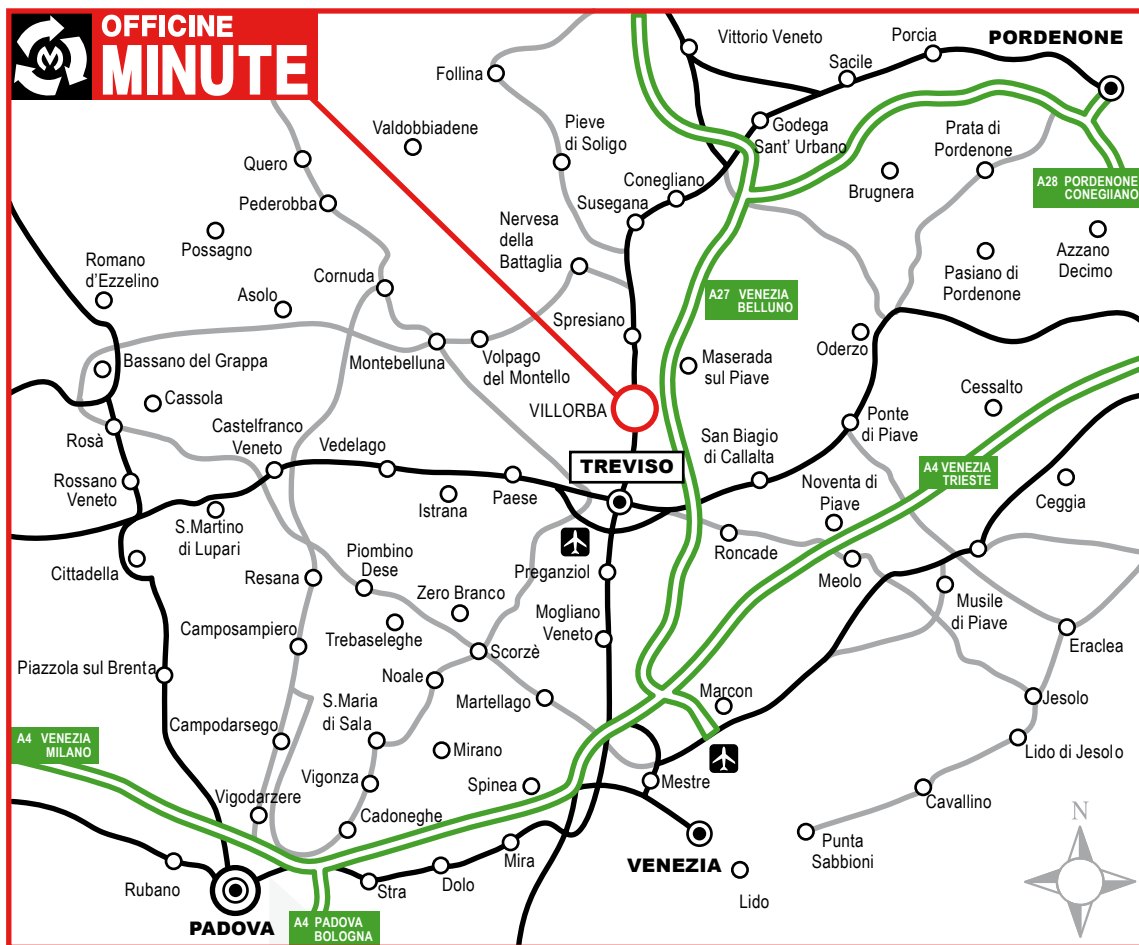

The control panel constitutes the "brain" behind the dryer. The entire drying process is managed by means of a PLC and a TOUCH SCREEN, with a management program under constant development. On-line assistance and supervision are accessible by means of a PC connection.
